1

Download Termux (Correct Version)

CRITICAL: Do NOT download from Play Store!

Download from F-Droid for latest features:

<https://f-droid.org/packages/com.termux>

✓ Download Complete

2

Ultra-Minimal Package Installation

Install ONLY essential packages (NO heavy dependencies):

```
# Update Termux
first pkg update
&& pkg upgrade -y
# Install ONLY essentials pkg
install curl git python nodejs nano
# Verify installations
curl --version
git --version
python --version
node --version
```

✓ Installation Complete

3

Create Project Structure

```
# Create OASIS 2.0 directory
mkdir ~/oasis2 cd ~/oasis2
# Create clean structure
mkdir scripts api clients logs configs
# Create main controller
cat > controller.py << 'EOF'
#!/usr/bin/env python3
""" OASIS 2.0 Ultra-Lightweight Controller
No heavy dependencies - Pure API orchestration """
import json
import os
from urllib.request import urlopen, Request
from urllib.parse import urlencode
class OASISController:
    def __init__(self):
        self.hf_token = os.getenv('HF_TOKEN')
        self.base_url = 'https://api-inference.huggingface.co'
    def query_model(self, model_name, inputs):
        headers = {"Authorization": f"Bearer {self.hf_token}"}
        data = json.dumps({"inputs": inputs})
        request = Request(self.base_url + model_name, data=data.encode(), headers=headers)
        with urlopen(request) as response:
            return json.loads(response.read())
if __name__ == "__main__":
    controller = OASISController()
    print("OASIS 2.0 Controller Ready!")
EOF
chmod +x controller.py
```
